Examination 2020 under cluster 4 (PCE)

Program: BE Mechanical Engineering Curriculum Scheme: Rev2012

Examination: Fourth Year Semester VII

Course Code: MEE7012 Course Name: Power Plant Engineering (Elective-II)

Time: 1 hour

Max. Marks: 50

Note to the students:- All the Questions are compulsory and carry equal marks .

Q1.	A cogeneration plant produces		
Option A:	power		
Option B:	process heat		
Option C:	maximum efficiency		
Option D:	both power and process heat		
Q2.	What is the effect of increase in pressure at which heat is added on the		
	pump work in the Rankine cycle?		
Option A:	the pump work decreases with increase in pressure of heat addition		
Option B:	the pump work increases with increase in pressure of heat addition		
Option C:	the pump work does not change with increase in pressure of heat		
	addition		
Option D:	the pump work either increases or decreases with increase in pressure of		
	heat addition		
Q3.	In India largest thermal power station is located at		
Option A:	Kota		
Option B:	Sarnı		
Option C:	Chandrapur		
Option D:	Neyveli		
Q4.	I he proper indication of incomplete combustion is		
Option A:	high CO content in flue gases at exit		
Option B:	high CO2 content in flue gases at exit		
Option C:	high temperature of flue gases		
Option D:	the smoking exhaust from chimney		
05			
<u>Q5.</u>	I ne commercial sources of energy are		
Option A:	solar, wind and biomass		
Option B:	tossil tuels, hydropower and huclear energy		
Option C:	wood, animai wastes		
Option D:	agriculture wastes		
06	The percentage Overgen by velope in atmachants sin is		
Q0.	The percentage Oxygen by volume in atmosphere air is		
Option A:	0.22		
Option B:	0.23		
Option C:	0.70		
Option D:	0.79		

Examination 2020 under cluster 4 (PCE)

07			
Q7.	What is the function of 'stroker' ?		
Option A:	Burning fuel		
Option B:	Handling fuel		
Option C:	Feeding fuel		
Option D:	Storage fuel		
Q8.	In the spreader stroker secondary air is supplied		
Option A:	through nozzles		
Option B:	through holes		
Option C:	from top side		
Option D:	from bottom side		
Q9.	The major constituent of fly ash is		
Option A:	Magnesium oxide		
Option B:	Aluminum oxide		
Option C:	Silicon dioxide		
Option D:	Calcium oxide		
Q10.	In which burner liquid fuel is raised by capillary action?		
Option A:	Re-circulating burner		
Option B:	Wick burners		
Option C:	Rotating cup burner		
Option D:	Pressure jet burners		
Q11.	Pumped storage plant in connection with thermal power plant is used to		
	take		
Option A:	Base load		
Option B:	Equal load		
Option C:	No load		
Option D:			
Option D.	Peak load		
Option D.	Peak load		
Q12.	Peak load Which is NOT design of GT-ST cycle ?		
Q12. Option A:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas		
Q12. Option A: Option B:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas		
Q12. Option A: Option B:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas		
Q12. Option A: Option B:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine.		
Q12. Option A: Option B: Option C:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler.		
Q12. Option A: Option B: Option C: Option D:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases.		
Q12. Option A: Option B: Option C: Option D:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases.		
Q12. Option A: Option B: Option C: Option D: Q13.	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases.		
Q12. Option A: Option B: Option C: Option D: Q13.	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases. In combined GT-ST plant no mechanical draught supply needed because		
Q12. Option A: Option B: Option C: Option D: Q13. Option A:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases. In combined GT-ST plant no mechanical draught supply needed because 		
Q12. Option A: Option B: Option C: Option D: Q13. Option A: Option B:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases. In combined GT-ST plant no mechanical draught supply needed because 		
Q12. Option A: Option B: Option C: Option D: Q13. Option A: Option B: Option C:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases. In combined GT-ST plant no mechanical draught supply needed because furnace gas pressure is low furnace gas pressure is high		
Q12. Option A: Option B: Option C: Option D: Q13. Option A: Option B: Option C: Option C:	Peak load Which is NOT design of GT-ST cycle ? Heating feed water with exhaust gas Employing the gases from supercharged boiler to expand in gas turbine. Employing the gases as combustion air in steam boiler. Rejecting heat from steam to heat the gases. In combined GT-ST plant no mechanical draught supply needed because furnace gas pressure is low furnace gas pressure is high Induced or forced draught is not possible.		

Examination 2020 under cluster 4 (PCE)

Т

Q14.	The conversion of old power plant into combined power plant is known as	
Option A:	Repowering.	
Option B:	Reusing.	
Option C:	Reforming.	
Option D:	Renovating.	
Q15.	The energy produced by 4.5 tons of high grade coal is equivalent to energy produced by	
Option A:	1 kg of uranium	
Option B:	1 gm of uranium	
Option C:	100 gm of uranium	
Option D:	10 gms of uranium	
Q16.	Enriched Uranium is one in which	
Option A:	% of U-235 has been artificially increased	
Option B:	% of U-238 has been artificially increased	
Option C:	% of U-234 has been artificially increased	
Option D:	Extra energy is pumped from outside	
017		
Q17.	Coolant used in liquid metal fast breeder reactors is	
Option R:	neavy water	
Option B.	molten sodium	
Option C:		
Option D:	helium	
018	Plutonium-239 is	
Option A:	Fissile material	
Option B:	Fissionable material	
Option C:	Moderator	
Option D:	Poison	
Q19.	Determine total annual cost (Rs.) of water softening plant from the following data. Cost = Rs. 2.56*10^5, Salvage value = 6%, Life = 10yrs, annual cost of chemicals = Rs. 15000, Annual repair cost = Rs. 10000, Labour cost per month = Rs. 3000, Rate of interest by sinking fund method = 11%, Salvage value = Rs. 15360.	
Option A:	72390.6	
Option B:	74390.6	
Option C:	75390.6	
Option D:	/3390.6	

Examination 2020 under cluster 4 (PCE)

Q20.	The area under the load curve represents		
Option A:	number of units generated		
Option B:	the average load on power system		
Option C:	maximum demand		
Option D:	load factor		
_			
Q21.	Block rate tariff, where energy charge decreases with the increase in		
	energy consumption,		
Option A:	Discourages the consumers for more consumption.		
Option B:	Encourages the consumers for more consumption.		
Option C:	Encourages the consumers to restrict their deman		
Option D:	Encourages the consumers to improve the power factor.		
Q22.	Why is Maximum demand tariff not applicable to domestic consumers?		
Option A:	Low load factor		
Option B:	Lower energy consumption		
Option C:	Low maximum demand		
Option D:	Low power factor		
Q23.	Size and cost of installation depends upon		
Option A:	average load		
Option B:	maximum demand		
Option C:	square mean load		
Option D:	square of peak load		
Q24.	A motor of 25 H.P connected to condensate pump has been burnt		
	beyond economical repairs. An alternative has been proposed with		
	following details. Following is the given data for certain power plant.		
	Salvage value = Rs.600, Depreciation = Rs. 220 / year , Interest = Rs250 /		
	year, Maintenance = Rs. 400/-, Energy rate is 12 paise/kWh. Motor is		
	operated at full load for 30% of time and at half load for the remaining		
	period. Assume 365 days in year. Efficiency at full load and half load is		
	90% and 85% respectively. Calculate total cost of motor in Rs/year		
Option A:	17272		
Option B:	14272		
Option C:	15272		
Option D:	16272		
Q25.	Ideal regenerative Rankine cycle		
Option A:	Does not affect efficiency		
Option B:	Increases work output		
Option C:	Increases the heat supplied		
Option D:	Increases efficiency		

Examination 2020 under cluster 4 (PCE)

Program: BE Mechanical Engineering Curriculum Scheme: **Rev 2012** Examination: **Fourth Year Semester VII** Course Code: **MEE7012** and Course Name: **Power Plant Engineering (Elective II)**

Time: 1 hour

Max. Marks: 50

Question	Correct Option (Enter either 'A' or 'B' or 'C' or 'D')
Q1.	D
Q2.	В
Q3.	С
Q4	А
Q5	В
Q6	А
Q7	С
Q8.	А
Q9.	С
Q10.	В
