Examination 2020 under cluster 4 (PCE)

Program: BE Mechanical Engineering Curriculum Scheme: Rev2012 Examination: Third Year Semester V Course Code: MEC503 and Course Name: Production Process - III

Time: 1 hour

Max. Marks: 50

Note to the students:- All the Questions are compulsory and carry equal marks .

Q1.	Which of the following should be sturdy and capable of tolerating high level vibrations?		
Option A:	High Speed Machines		
Option B:	Low Speed Machines		
Option C:	Non-working Machines		
Option D:	Light weight machines		
Q2.	The machine in which the contact time between tool and work is large is		
Option A:	high speed machine		
Option B:	the conventional machine		
Option C:	Turbo machine		
Option D:	Heavy duty fast machines		
Q3.	The specifications of metal sheets is not given in terms of their		
Option A:	gauge numbers		
Option B:	Length		
Option C:	Width		
Option D:	Vibration		
Q4.	Gauge number of metal sheets represents		
Option A:	thickness of metal sheets		
Option B:	Vibration		
Option C:	Movement		
Option D:	Color		
Q5.	The operation with which specific shapes or figures are produced on the sheet metal is called as		
Option A:	Embossing		
Option B:	Shaving		
Option C:	Nibbling		
Option D:	Notching		
Q6.	Which of the following is a metal cutting operation?		
Option A:	Bending		
Option B:	Notching		
Option C:	Drawing		
Option D:	Forming		
-			
Q7.	The difference in dimensions between die and punch (mating members of a die set) is		
	known as		
Option A:	U-bending		

Examination 2020 under cluster 4 (PCE)

Option B:	V-bending	
Option C:	Clearance	
Option D:	Notching	
Q8.	The working faces of the punch or die are ground off so that, it does not remain parallel to the horizontal plane and remains inclined, this inclination angle is called as	
Option A:	Stock	
Option B:	Shear	
Option C:	Thickness	
Option D:	Height	
Q9.	As per six-point location principle, workpiece can be completely restrained with the help of three location points in one plane, two location points in the second plane and one location point in the third plane, this principle is also called as	
Option A:	3-3-3 principle	
Option B:	2-2-3 principle	
Option C:	1-1-1 principle	
Option D:	3-2-1 principle	
Q10.	Different types of mechanical clamping devices, which are quick acting and easy to handle are called as	
Option A:	Quick acting clamps	
Option B:	fast clamps	
Option C:	slow clamps	
Option D:	fake clamps	
- C		
Q11.	The jig in which a channel is made by machining a solid cast iron pieces or by fabricating mild steel plates is called as	
Option A:	Template jig	
Option B:	Channel type jig	
Option C:	Swinging leaf type jig	
Option D:	Pot type jig	
Q12.	The plate type jig with jig feet which is used to provide the resting surface to the jig during the operation is called as	
Option A:	Pot type jig	
Option B:	Table type jig	
Option C:	Angle plate jig	
Option D:	Swinging leaf type jig	
Q13.	Turning fixture should be perfectly balanced and light in weight to reduce vibrations, as	
Option A:	it is stationary	
Option B:	it is revolving with workpiece	
Option C:	it has loose fitting and may fall	
Option D:	it is not properly designed	
-		
Q14.	Which of the following is not a part of the milling fixture?	
Option A:	a heavy and rigid base	
Option B:	glass handle	

Examination 2020 under cluster 4 (PCE)

Option C:	locating and clamping devices	
Option D:	setting block and feeler gauges	
-		
Q15.	Electro-chemical machining (ECM) is based on	
Option A:	Pascal's law	
Option B:	Hooke's law	
Option C:	Kepler's laws of planetary motion	
Option D:	Faradays law of electrolysis	
1		
016.	The machining which consists of a stimulating light source or Xenon flash lamp and lase	
	rod is called as	
Option A:	Laser Beam Machining (LBM)	
Option B:	Electro-chemical machining (ECM)	
Option C:	Electron Beam Machining (EBM)	
Option D:	Plasma Arc Machining (PAM)	
Q17.	In Electron Beam Machining, when electrons strike the workpiece	
Option A:	their kinetic energy is converted into heat energy which raises the temperature of the	
	workpiece.	
Option B:	their kinetic energy is converted into heat energy which decreases the temperature of the	
	workpiece.	
Option C:	their kinetic energy is converted into wind energy which decreases the temperature of the	
Outing Dr	workpiece.	
Option D:	It decreases the temperature of the workpiece.	
018	A system in which a DC source of supply is used to obtain rapidly recurring discharges	
Q18.	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator	
Q18. Option A:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator	
Q18. Option A: Option B: Option C:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator	
Q18. Option A: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap	
Q18. Option A: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap	
Q18. Option A: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is	
Q18. Option A: Option B: Option C: Option D: Q19. Option A:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Q20.	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling?	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Q20. Option A:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Q20. Option A: Option A: Option B:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Q20. Option A: Option A: Option B: Option C:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option A: Option C: Option D: Q20. Option A: Option A: Option B: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option B: Option C: Option D: Q20. Option A: Option A: Option B: Option B: Option C: Option C: Option C:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option A: Option B: Option D: Q20. Option A: Option B: Option B: Option C: Option D:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging An ideal injection molding system gives the output of	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option A: Option C: Option D: Q20. Option A: Option A: Option B: Option B: Option C: Option D: Q21. Option A:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging An ideal injection molding system gives the output of molded parts of non-uniform density, and free from all runners, flash, and gate stubs.	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option A: Option C: Option C: Option D: Q20. Option A: Option B: Option C: Option D: Q21. Option A: Option A: Option A:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging An ideal injection molding system gives the output of molded parts of non-uniform density, and free from all runners, flash, and gate stubs. molded parts of uniform density, and free from all runners, flash, and gate stubs.	
Q18. Option A: Option B: Option C: Option D: Q19. Option A: Option A: Option C: Option D: Q20. Option A: Option B: Option C: Option D: Q21. Option A: Option A: Option B: Option C:	A system in which a DC source of supply is used to obtain rapidly recurring discharges Refrigerator Iron Relaxation generator water tap Frequently used cooling mixture in fluid cooled molds is paint and cement oil and cement glass and cement glass and cement water and ethylene glycol Which of the following causes the molded part to get fixed compactly at the cores as they are removed after cooling? Shrinkage Drying Soaking Merging An ideal injection molding system gives the output of molded parts of non-uniform density, and free from all runners, flash, and gate stubs. molded parts of non-uniform density, loaded with runners, flash, and gate stubs.	

Examination 2020 under cluster 4 (PCE)

Q22.	The mold which is used in case a section of the runner system lies in a distinct plane	
	from the injection location is called as a	
Option A:	single-plate mold	
Option B:	three-plate mold	
Option C:	no-plate mold	
Option D:	four-plate mold	
Q23.	Advantages of Flexible Manufacturing System (FMS) can be	
Option A:	Due to integration of machines lesser set up time is required hence, productivity	
	increases.	
Option B:	high implementation cost.	
Option C:	is time consuming.	
Option D:	requires trained personnel.	
Q24.	A system that has been modelled in a way to meet the continuously changing customer	
	demands while maintaining the quality and expenditure of the production process is	
	known as	
Option A:	Rigid Manufacturing System	
Option B:	Unchanged Manufacturing System	
Option C:	Slow Manufacturing System	
Option D:	Flexible Manufacturing System (FMS)	
	5	
Q25.	A structure that is able to easily adjust and comply to rapidly changing market demands	
100	is	
Option A:	Rigid Manufacturing System	
Option B:	Unchanged Manufacturing System	
Option C:	Flexible Manufacturing System (FMS)	
Option D:	Slow Manufacturing System	

101 Calo 1

Examination 2020 under cluster 4 (PCE)

Program: BE Mechanical Engineering Curriculum Scheme: Rev2012 Examination: Third Year Semester V Course Code: MEC503 and Course Name: Production Process - III

Time: 1 hour

5.3.00

Max. Marks: 50

Question	Correct Option (Enter either 'A' or 'B' or 'C' or 'D')
Q1.	А
Q2.	В
Q3.	D
Q4	А
Q5	А
Q6	В
